code/example.java

```
1 package mypkg;
2
3 public class RunClassName
4 {
5     public static void main( String[] args ) throws Exception
6     {
7         if( 1 > args.length ) {
8             System.out.println( "Klassenname (z.B. 'mypkg.MyClass1') als
              Parameter benoetigt." );
9             System.exit( 1 );
10        }
11        Object obj = instantiateClassName( args[0] );
12        if( obj instanceof Runnable )
13            ((Runnable)obj).run();
14        else
15            System.out.println( obj );
16    }
17
18    public static Object instantiateClassName( String className )
19        throws Exception
20    {
21        Class c = Class.forName( className );
22        if( null == c )
23            throw new Exception( "Error: Unable to access class '" +
              className + "'." );
24        Object o = c.newInstance();
25        if( null == o )
26            throw new Exception( "Error: Unable to create instance of
              class '" + className + "'." );
27        return o;
28    }
```
